TEXA

TPMS Solutions

More and more bikes come as standard or can be fitted with a tyre pressure monitoring system, which is a major contribution to safety. Using its experience in the world of car systems, TEXA has developed a special solution for the diagnosis of TPMS systems on motorcycles.

TPS

The TPS communicates with the valve sensors on each wheel, which activates them if they are in standby and verifies their efficiency. The tool's display reads out pressure, temperature and battery charge level (where available), as well as the identification codes and other diagnostic information provided by the vehicle manufacturer. TPS lets you check the efficiency of tyre pressure sensors so that you can change them if necessary. TPS can be used to activate sensors when they are being initialised with IDC5 software.

APP TPMS Repair

The TPS integrates perfectly with all the other TEXA diagnostic products in your workshop. The free "TPMS Repair" app can connect with any PC running TEXA IDC5 software or with AXONE Nemo and AXONE 4 Mini.
