IDC5 software update CAR 66.0.0

Once again the new **CAR 66** software update allows you to benefit from the best of multi-brand diagnosis by TEXA: a large number of diagnostic developments, special functions and technical information that is essential in order to complete even the most complex workshop operations successfully.

As compared to the previous version, **as many as 46 makes have been updated**. For 42 of these makes, moreover, new diagnostic systems never released before have been developed, involving **816 models**. Over 1000 diagnostic systems have been developed, involving over 200 systems. Furthermore, the work of TEXA developers has been once again focused on the Driver assistance systems and on the **ADAS**. Among the new software features we wish to highlight the **TGS3s** function: starting from the CAR 66 version, it is possible to **save the scans** of the

vehicle control units in the **Customer Management section**.

IDC5 CAR 66 includes over 20,000 new possible selections for the major makes on the market worldwide, among which:
